Subject: RE: Mercury Baseline data and info

Lynn,
I'm finally getting back on track with this. I'm going to try to clarify the needs in this email and then follow-up with a phone call.

What we are trying to do is put together a track record of what coal was burned when at each coal unit during the period January 1995 through December 2005. You have provided DES with a chart that graphically gives the coal-use breakdown in general sulfur content categories. Providing the tabulated values that produced this chart would be a big step in the right direction. What we really need, is what mine source coal was burned when (i.e., Bailey, Pocahontas, etc.) We have records documenting general sulfur and mercury content by mine source. If you would rather we use date specific sulfur/mercury content info, we would be happy to update our calculations.

You had asked if we needed daily data or a summary. Daily or monthly data is preferred.

Outside of the original data request, I would like to get mercury content information for four coals used in the past. These are Fed #2, Integrity, Kennecott, and Quaker.

Thanks for your time and patience.
-Jeff

Hi Jeff. I know we have been playing telephone tag and exchanging voice messages; coupled with the fact that we are both trying to revisit and confirm the status of all the previous exchange of information.

You have confirmed the request for "date-specific information for the type and quantity of coal burned on a unit by unit basis for each of the affected units at Merrimack and Schiller Stations for the period 1995 through 2005".

If I understood you voice mail, I believe you are looking for data that was used to produce the graph of baseline coal burned at MK. We have that information.

I still have a few questions:
For example - Are you looking for daily info or would it be appropriate to find a summarizing document?, Do we need SR info?, etc. I know if we review this together we can bring it to closure quickly.

I am at the NHPUC tomorrow morning, but are you available for a 200pm call tomorrow or please suggest a better time if necessary.

Thanks
Jeff
